

St Luke's Science and Sports College and South West Grid for Learning are hosting an E-safety Event for Parents and Carers

Children and young people have embraced the internet and mobile technologies. Parents need to understand these technologies and how children use them to help keep them safe in the ever changing environments that make up the World Wide Web.

This event aims to:

1. Introduce Parents and Carers to the online and mobile technologies that children and young people use and the associated benefits and risks.
2. Discuss the issues that parents face in an ever changing electronic environment.
3. Illustrate how parents can be guided to and understand an array of relevant and practical resources and programmes
4. Provide Parents and Carers with an understanding of how to talk to their children in an open way which helps children report any problems they may have.

St Luke's are hosting a Q&A session with the experts to include:

1. How will I know if my child is being cyber bullied?
2. Who do I report to if I feel my child is being groomed?
3. Can I open a Facebook account for my child if they are under 13?
4. How can I view my child's online profile?
5. How can I get stuff removed from the web if my child has done something stupid online?
6. What is the best software to protect my child?

Refreshments provided

When: **Tuesday 30th April**

Where: **St Luke's Science and Sports College**

Time: **5.30-7pm**
